Professional Summary

Backend Software Engineer with 3+ years of experience designing and developing cloud-native, managed data services at high volume and velocity. Proficient in Java, Python, and Node.js with hands-on experience in AWS, CI/CD pipelines, and the full software development lifecycle (SDLC). Skilled in building reliable, scalable data pipelines, TDD, and working cross-functionally with stakeholders. Familiar with Azure and GCP concepts; experienced in TCP/IP, UDP, DNS, and HTTP networking protocols.

Technical Skills

Languages: Java, Python, JavaScript, SQL, C++ (fundamentals)
Backend: Spring Boot (Security, WebFlux), Node.js (Express/NestJS)
Databases: MySQL, PostgreSQL, MongoDB, Redis (caching), DynamoDB
Cloud & DevOps: AWS (S3, SQS, Lambda, IAM), Azure (familiarity), GCP (familiarity), Docker, Kubernetes (Helm, k9s)
CI/CD: Jenkins, GitHub Actions — automated builds, testing, and deployments across full SDLC
Messaging & Streaming: Kafka, RabbitMQ — distributed systems, load balancing, request lifecycle
Testing: Test Driven Development (TDD), JUnit, Mockito, Jest, Integration Testing
Monitoring: Prometheus, Grafana, CloudWatch, OpenTelemetry
AI & LLM: OpenAI/Anthropic APIs, LangChain, embeddings, vector search, agentic workflows
Networking: HTTP, HTTPS, DNS, TCP/IP, UDP — fundamentals and REST protocol design
Tools: Git, Bash, Postman, Gradle/Maven

Experience — 3 Years

BrowserStack
Dec 2024 – Present [1.5 yr]

Software Engineer I — Backend
Remote, India

- Designed and developed cloud-native, managed data services using high-volume, high-velocity asynchronous pipelines with BullMQ, processing 10,000+ operations per day reliably.
- Contributed across the full software development lifecycle (SDLC) — from PRD analysis and design to development, deployment, and production monitoring of data pipeline services.
- Implemented agentic orchestration across the test case generation workflow, designing multi-agent pipelines where planning, feature extraction, scenario generation, and deduplication agents coordinate autonomously — improving accuracy, speed, and reliability.
- Extracted features from PRDs using LLMs, identified relevant scenarios, and generated functional and non-functional test cases for automated inclusion in the TCM system; collaborated with cross-functional stakeholders throughout the process.
- Improved system throughput by 45% while maintaining 99.9% pipeline reliability through robust error handling, observability (Prometheus/Grafana), and scalable queue architecture.
- Practiced TDD using Jest with unit and integration test coverage across core pipeline modules; maintained CI/CD pipelines via GitHub Actions.
- Technologies: Node.js, BullMQ, WebSockets, Docker, AI Integrations (LLMs), Test Case Management (TCM).

Kanerika Software Pvt Ltd
June 2023 – Dec 2024 [1.5 yrs]

Associate Software Engineer
Hyderabad, India

- Developed and optimized REST APIs using Java and Spring Boot, ensuring seamless integration with a PostgreSQL database for scalable and reliable data management — contributing to all stages of the SDLC.
- Engineered 'Phi', a data visualization product enabling dynamic data presentation through charts and measures, with real-time data connections — built to be scalable and fault-tolerant.
- Designed architecture based on atomic design principles, promoting modular, reusable components across cloud-native frontend and backend services, reducing code redundancy.
- Maintained CI/CD pipelines using GitHub Actions for automated builds, testing, and deployments; collaborated with stakeholders to translate requirements into technical solutions.
- Technologies: Java, Spring Boot, REST APIs, React.js, Redux, PrimeReact, PostgreSQL, GitHub Actions.

Projects

AI Document Intelligence Platform | Node.js / Spring Boot, Java, LangChain, FAISS, PostgreSQL, Docker, AWS S3

- Designed and developed a scalable, cloud-native backend system for processing and querying large documents using LLM-based pipelines — deployed on AWS with Docker for reliability.
- Implemented Retrieval-Augmented Generation (RAG) to enable natural language querying over ingested documents, combining lexical and semantic similarity techniques for duplicate detection.
- Built high-volume, high-velocity asynchronous data processing pipelines using queues to handle large-scale document ingestion, transformation, and managed data services at scale.
- Maintained automated CI/CD pipelines and observed system health via CloudWatch and OpenTelemetry; applied TDD throughout development.

Education

MBM University — B.Tech in Computer Science (CGPA: 8.5 / 10) 2019 – 2023
Jodhpur, Rajasthan
